

Group X Form (version BN)

1. The box contains a small envelope labeled “key.” **Remove this envelope from the box now** and keep it until the end of the experiment. You will need the key in this envelope to collect your money payoffs from your mailbox.
2. The box also contains an envelope labeled “my show-up fee” that contains the 10 one-dollar certificates that are your show-up fee.
3. **YOUR DECISION TASK** is to decide whether you want to give none, some, or all of your certificates to the paired person in Group Y by transferring them to the other envelope, labeled “certificates sent to the paired person in Group Y.” Recall that the experimenter will triple the number of any certificates that you do give away.
4. **REMEMBER** that the Group Y people do not have a decision to make. This means that your paired person in Group Y cannot return to you any of the tripled number certificates, if any, that you send him or her.
5. Any certificates that are left loose in the box (that is, not put in either envelope) when you return it to the monitor will not be paid off in U.S. dollars to anyone by the experimenter at the end of the experiment.
6. You have 10 minutes to make your decision.
